

Installation

The initial installation of SiRFLive using the setup.exe and SiRFLiveInstaller.msi files requires the user to uninstall

WARNING!!! Please uninstall and then confirm complete removal of any previous versions of SiRFLive. If there are any trace files left please delete them before installing this new package. This only needs to be done the first time SiRFLiveInstaller.msi is used.

1. Backup the current SiRFLive installation folder (e.g. C:\Program Files\SiRF\SiRFLive) or rename it.
2. Uninstall SiRFLive through Start | Settings | Control Panel | Add or Remove Programs.
3. Delete any files or folder directories that are not removed from the installation folder.
4. Install the new version by double-clicking the setup.exe file and follow the installation instructions.

Windows Vista and Windows 7

Due to compatibility issues some files from previous versions of SiRFLive may not be uninstalled when a new version is installed. Please confirm that the previous version has been uninstalled using the steps described above before attempting to install SiRFLive.
