Product Description

The GT863-3EU terminal is a standalone modem solution for wireless m2m applications based on the Telit HE910-EUx HSPA core engine. It is equipped with an integrated SIM card-holder, USB connector, RS232 and GPI0 ports. It is fully backward compatible with existing EDGE and GSM/GPRS networks through accomplished quad-band radios. The GT863-3EU is optionally available with an m2mAIR SIM card for advanced value-added services and connectivity subscription. Working out-of-the-box for applications in all regional markets where the product has frequency band coverage, the m2mAIR-equipped GT863-3EU is the ideal solution for wide geography applications, field trials and flash deployments of devices such as in coverage of large events and other similar applications.

Key Benefits

- Programmable, flexible standalone solution with Python script interpreter
- Works in most environments with its extended operating temperature and wide supply voltage (6-55 VDC)
- Internet friendly with integrated TCP/IP stack
- Flexible connectivity via standard serial USB interface or optional RS232
- Easy to integrate with drivers for the most common operating systems
- Over-the-Air firmware update with Premium FOTA Management.

m2mAIR Ready

This product is capable of supporting the extensive suite of m2mAIR value-added services and connectivity you can use to enhance your application and boost your competitive advantage.
