

Product Description

The SE150A4 series is Telit's first generation of smart modules with Android that supports LTE Cat 4, Wi-Fi and Bluetooth connectivity, and an embedded GNSS receiver in one package.

Powered by the Qualcomm® quad-core ARM® Cortex®-A53 64-bit processor with built-in Adreno™ 308 GPU, the SE150A4 modules are ideal for industrial and consumer applications requiring high data rates, multimedia functions and edge computing capabilities. They provide interfaces to easily connect to displays, cameras and various sensors and come with high-performance application processing and graphical processing power to boost the next generation of smart IoT devices requiring multimedia capabilities. Android allows easy, flexible and streamlined application development and opens access to the biggest software ecosystem for enhanced innovation.

A rich set of interfaces, including but not limited to LCM, camera, touch screen, microphone, headset, speaker, SDIO 3.0, USB 2.0, UART, SPI and I2C, make these modules perfect for a wide range of IoT applications. These use cases include:

- Mobile point-of-sale (mPOS), smart cash registers and vending machines
- Smart alarm panels
- Security surveillance cameras and home automation security systems
- Smart home gateways
- Smart robots
- Industrial personal digital assistants (PDA)
- Handheld PCs and tablets
- Police and law enforcement equipment
- Telematics cameras
- Digital video recorders (DVR)
- In-car video streaming and entertainment systems positioning receiver

SE150A4 series modules deliver maximum data rates of up to 150 Mbps downlink and 50 Mbps uplink over the LTE network and support Wi-Fi communication in compliance with IEEE 802.11a/b/g/n standards and Bluetooth Low Energy (BLE) 4.2. They also embed a multi-constellation and high-sensitivity GNSS (GPS, BeiDou, GLONASS and Galileo) receiver for precise positioning. The compact LCC +LGA 40.5 x 40.5 mm form factor allows easy integration in portable devices.

With the functionality and integrated resources in these compact modules, developers can easily and quickly develop user-friendly, touch-screen-equipped, IoT-enabled devices.
